Re: Revere Copper and Brass, Detroit, Michigan
TDD #5-8709-08

Dear Mr. Faryan:

The U.S. Environmental Protection Agency tasked the Technical Assistance Team (TAT) on September 14, 1987, to conduct a site assessment (SA) at the Revere Copper and Brass site in Detroit, Michigan. The Revere Copper and Brass site, an abandoned copper refabrication and recycling facility, was suspected of containing elevated levels of polychlorinated biphenyls (PCB). On September 17, 1987 the TAT conducted a SA which included soil sampling.

Analysis of samples collected by the TAT during the SA revealed limited PCB contamination at the site. The TAT recommends that the current owner of the site be notified of the PCB contamination and be made responsible for necessary cleanup actions. If the owner is unwilling or unable to undertake the necessary clean-up actions, the TAT recommends that the site be referred to the Michigan Department of Natural Resources for further action under Michigan Act 307.
